## **Evaluation Calculation Process**

## Introduction

All the requirements associated in the scoring of proposals in response to RFP Section 3, Scope of Work, Section 6, Contractor Profile and Key Personnel, Section 8, Contract Standards, and Section 9.c, Small Business (SWaM) Procurement Plan, have been documented on the score sheet and separated into three (3) classifications; one being identified as "Priority" (green highlight); two being identified as "General" (yellow highlight); and the third being identified as "Contract" (orange highlight). The definition for each is described below:

- 1. <u>Priority Classification</u> These are requirements in the RFP identified by the stakeholder as being a priority to the scope of work or the "backbone" to the purpose of the RFP. As with all requirements, they have been assigned a weight to identifying the importance they carry in the evaluation for their respective classification. The ratio this classification will carry as a percentage of score between the priority and general classification is **60**%.
- 2. <u>General Classification</u> These are requirements in the RFP identified by the stakeholder as being generic to the scope of work and are ancillary to the requirements identified in the priority classification. As with all requirements, they have been assigned a weight identifying the importance they carry in the evaluation for their respective classification. The ratio this classification will carry as a percentage of score between the priority and general classification is **40**%.
- 3. <u>Contract Classification</u> These are requirements in the RFP identified by the stakeholder as being extraneous to both the priority and general classifications. These requirements will be scored individually and included in the scoring total.

## **Calculation for Evaluation Score Sheet**

- 1. The Supplier Priority Requirements Score (SPRS) is calculated by adding all the weighted scores for all the priority requirements identified by green highlight on the consensus score sheet.
- 2. The Supplier General Requirements Score (SGRS) is calculated by adding all the weighted scores for all the general requirements identified by yellow highlight on the consensus score sheet.
- 3. The Supplier Priority Weighted Score (SPWS) is computed by multiplying the SPRS by result of 60% of total assigned weights for both Priority and General Requirements divided by the priority assigned weights (SPRS\*[(total assigned weight\*0.60)/total supplier priority assigned weights]).
- 4. The Supplier General Weighted Score (SGWS) is computed by multiplying the SGRS by result of 40% of total assigned weights for both priority and General Requirements divided by the General assigned weights (SGRS\*[(total assigned weight\*0.40)/total supplier general assigned weights]).
- 5. The Suppliers Contract Related Weighted Score (SCRWS) is computed by adding all the weighted scores for all the contract requirements identified by orange highlight on the consensus score sheet.
- 6. The Suppliers Scoring Total is calculated by adding the totals for SPWS, SGWS and SCRWS.
